### Kesimpulan:

Keberhasilan konfigurasi dan pengujian RIP (Routing Information Protocol) menunjukkan bahwa protokol ini dapat mendistribusikan informasi routing dengan efektif di jaringan. Ketika router-router yang menggunakan RIP berhasil saling ping, ini mengindikasikan bahwa RIP telah berhasil memproses dan mengupdate tabel routing dengan benar, memungkinkan konektivitas antar router terjalin dengan baik.

#### Kesimpulan:

Percobaan EIGRP pada jaringan ini berhasil menunjukkan bahwa EIGRP dapat mengonfigurasi dan mengelola rute antar router dengan baik dan efisien. Protokol ini memiliki kemampuan konvergensi yang cepat, membuatnya sangat cocok untuk jaringan besar dan kompleks. Pengujian konektivitas yang dilakukan berhasil, dengan tidak ada gangguan pada komunikasi antar perangkat, menunjukkan bahwa EIGRP bekerja dengan baik dalam skenario ini
